

Units of length – metres and centimetres

We use metres, centimetres and millimetres regularly in everyday life. There are 100 centimetres in 1 metre. Another way to think about this relationship is that 1 centimetre is one hundredth of a metre.

$$100 \text{ cm} = 1 \text{ m} \quad 1 \text{ cm} = \frac{1}{100} \text{ m or } 0.01 \text{ m} \quad \text{So } \frac{1}{2} \text{ m} = 50 \text{ cm} = 0.5 \text{ m}$$

1 Convert each metre measurement into centimetres:

a $2 \text{ m} = \boxed{200} \text{ cm}$ b $4 \text{ m} = \boxed{400} \text{ cm}$ c $\frac{1}{4} \text{ m} = \boxed{25} \text{ cm}$
 d $9 \text{ m} = \boxed{900} \text{ cm}$ e $\frac{1}{2} \text{ m} = \boxed{50} \text{ cm}$ f $1\frac{1}{4} \text{ m} = \boxed{125} \text{ cm}$

2 Convert each centimetre measurement to metres:

a $10 \text{ cm} = \boxed{0.1} \text{ m}$ b $30 \text{ cm} = \boxed{0.3} \text{ m}$ c $90 \text{ cm} = \boxed{0.9} \text{ m}$
 d $50 \text{ cm} = \boxed{0.5} \text{ m}$ e $75 \text{ cm} = \boxed{0.75} \text{ m}$ f $80 \text{ cm} = \boxed{0.8} \text{ m}$

3 Estimate and measure three things that fit in each category:

| | Estimate in cm | Measure in cm |
|-----------------------------|---------------------------|---------------|
| a About $\frac{1}{2}$ metre | | |
| b About $\frac{3}{4}$ metre | <i>Answers will vary.</i> | |
| c About 1 metre | | |

4 Match these objects to their correct measurement by connecting them with a line:

Units of length – metres and centimetres

- 5 Measure the length of the lines below using a ruler. Write each length in centimetres, to the nearest centimetre.

a  10 cm

b  12.5 cm

c  4 cm

- 6 Answer these questions about the lines above:

a How much longer is line **b** than line **c**? 8.5 cm

b What would the length of line **b** be if it was 3 cm shorter? 9.5 cm

c What would the length of line **c** be if it was 9 cm longer? 13 cm

- 7 Draw lines for the following measurements. Make sure you start each line on the dot.

a 14 cm 

b $\frac{1}{2}$ cm 

c $8\frac{1}{2}$ cm 

- 8 Work with a partner to measure the following parts of your body with a tape measure. Label your measurements to the nearest centimetre in the boxes.

a Across your shoulders. cm

c Around one ankle. cm

e From your foot to the top of your thigh. cm

g From the top of your forehead to your chin. cm

b Around your head. cm

d Around one wrist. cm

f Around one knee. cm

Answers will vary.

Units of length – length and decimal notation

When we measure things that are in metres and centimetres it is useful to record such lengths in decimal notation. Remember that $1 \text{ cm} = \frac{1}{100} \text{ m}$. This can be written as 0.01 m. So if we measure something that is 1 metre and 36 centimetres long, we would write it like this:

1.36 m

Hundredths of a metre
Tenths of a metre
Metres in whole numbers

1 Write the measurements in decimal form:

- a 1 metre 69 centimetres = m b 2 metres 91 centimetres = m
c 3 metres 23 centimetres = m d 34 centimetres = m
e 9 metres 4 centimetres = m f 5 metres 9 centimetres = m

2 Write these centimetres as metres using decimal notation:

- a 416 cm = m b 319 cm = m c 567 cm = m
d 607 cm = m e 510 cm = m f 4 cm = m

3 Write these measurements as centimetres:

- a 9.34 m = cm b 3.45 m = cm c 6.07 m = cm
d 5.47 m = cm e 0.94 m = cm f 9.51 m = cm

4 Draw lines for the following measurements. Make sure you start each line on the dot and keep each line parallel to the top of the page.

- a 0.07 m •—————
b 0.14 m •—————
c 0.02 m •—————

Units of length – length and decimal notation

5 Charlotte thinks that how far you can jump depends on your height. Do you think she is right? Work in a group of four to complete this table. You will need a tape measure and a space to do long jump. First measure each person’s height and record it under their name in decimal notation. Then each person jumps as far as they can. Measure this distance and record it under their height in decimal notation.

| | | | | |
|-----------|--|---------------------------|--|--|
| Name | | | | |
| Height | | <i>Answers will vary.</i> | | |
| Long jump | | | | |

- a Order the names in your group from tallest to shortest:
- _____
- b Order the long jumps from longest to shortest by writing the names:
- _____
- c Do you agree with Charlotte? Why or why not?
- Teacher check.*

6 Find the lines that connect to make these lengths: 1 m, 2 m and 3 m. Show you have found them by tracing over lines that connect in different colours. To start you off, the first length has been done for you.

- a $1\text{ m} = 0.4\text{ m} + 0.3\text{ m} + 0.3\text{ m}$ *You can trace over these in green.*
- b $2\text{ m} = 0.6\text{ m} + 0.8\text{ m} + 0.6\text{ m}$
- c $3\text{ m} = 0.4\text{ m} + 0.3\text{ m} + 1.3\text{ m} + 1.0\text{ m}$

Units of length – millimetres

We use metres, centimetres and millimetres regularly in everyday life.
You should learn these millimetre facts:

1 centimetre = 10 millimetres

$$1 \text{ cm} = 10 \text{ mm}$$

$$45 \text{ mm} = 4 \text{ cm } 5 \text{ mm}$$

$$45 \text{ mm} = 4.5 \text{ cm}$$

- 1 Estimate and measure these objects in millimetres: *Answers will vary.*

| | Object | Estimate | Millimetres |
|---|---------------------|----------|-------------|
| a | Width of your thumb | | |
| b | Length of your hand | | |
| c | Length of a grape | | |

- 2 Convert these centimetre measurements into millimetres:

a $4 \text{ cm} = \boxed{40} \text{ mm}$ b $3 \text{ cm} = \boxed{30} \text{ mm}$ c $10 \text{ cm} = \boxed{100} \text{ mm}$

d $6\frac{1}{2} \text{ cm} = \boxed{65} \text{ mm}$ e $7 \text{ cm} = \boxed{70} \text{ mm}$ f $\frac{1}{2} \text{ cm} = \boxed{5} \text{ mm}$

- 3 Write these as centimetres and millimetres:

a $17 \text{ mm} = \boxed{1} \text{ cm } \boxed{7} \text{ mm}$ b $29 \text{ mm} = \boxed{2} \text{ cm } \boxed{9} \text{ mm}$

c $42 \text{ mm} = \boxed{4} \text{ cm } \boxed{2} \text{ mm}$ d $36 \text{ mm} = \boxed{3} \text{ cm } \boxed{6} \text{ mm}$

- 4 Write these measurements as centimetres:

a $12 \text{ mm} = \boxed{1.2} \text{ cm}$ b $46 \text{ mm} = \boxed{4.6} \text{ cm}$

c $63 \text{ mm} = \boxed{6.3} \text{ cm}$ d $48 \text{ mm} = \boxed{4.8} \text{ cm}$

Units of length – millimetres

5 Follow these steps to measure these lines accurately in centimetres and millimetres.

- Line up the zero on your ruler with the start of the line.
- Read the last cm that is at the end of the line.
- Write down the cm number.
- Count the mm after the cm and write it next to the cm.

a = cm mm

b = cm mm

c = cm mm

d = cm mm

6 Complete the table for these deadly spiders:

| | | Length in mm | Length in cm and mm | Length in cm |
|---|---------------|--------------|---------------------|--------------|
| a | Redback | 7 mm | 0 cm and 7 mm | 0.7 cm |
| b | Funnel web | 15 mm | 1 cm and 5 mm | 1.5 cm |
| c | Black widow | 13 mm | 1 cm and 3 mm | 1.3 cm |
| d | Brown recluse | 25 mm | 2 cm and 5 mm | 2.5 cm |

e List these deadly spiders in order from smallest to largest:

Redback, black widow, funnel web, brown recluse

Convert it

apply

Getting ready

This is a game for two players. Players need a counter each, a copy of this page and a die.

copy

What to do

The object of this game is to get to the finish line first. Decide who will go first. That player rolls the die and moves that many spaces on the board. If you land on a measurement that is white, you must convert cm to mm OR m to cm. If you land on a measurement that is grey, you must either convert mm to cm OR cm to m. The other players decide if you are correct. If you are, then you move forward 1 space. If you are incorrect, you move backwards 2 spaces.

| | | | | | | | | |
|-------------------|------------------------|-------------------------|-----------------------|------------------------|--------------|------------------------|--------------|-----------------------|
| 73 | 74 $\frac{1}{2}$ cm | 75 | 76 20 cm | 77 9.5 m | 78 | 79 | 80 | 81 Finish |

| 1 Start | 2 | 3 3 cm | 4 | 5 100 mm | 6 | 7 5 m | 8 | 9 300 cm |

Perimeter – measuring shapes

Perimeter is the total length around the outside of an enclosed space.
To find the perimeter of this shape, we add the lengths of all the sides.

$$P = 6 + 2 + 6 + 2 \\ = 16 \text{ cm}$$

1 Find the perimeters of these shapes:

$$P = \underline{6} + \underline{1} + \underline{6} + \underline{1} \\ = \underline{14} \text{ cm}$$

$$P = \underline{3} + \underline{3} + \underline{3} + \underline{3} \\ = \underline{12} \text{ cm}$$

$$P = \underline{4} + \underline{3} + \underline{5} \\ = \underline{12} \text{ cm}$$

$$P = \underline{4} + \underline{3} + \underline{2} + \underline{3} \\ = \underline{12} \text{ cm}$$

2 Find the perimeter of this shape. Set your working out clearly.

$$8 + 5 + 3 + 2 + 2 \\ = 20 \text{ cm}$$

Perimeter – measuring shapes

3 Find the perimeters of these irregular shapes. Use the 1 cm dot paper as your guide.

4 Use a ruler to draw some shapes with the following perimeters. You can experiment first with a geoboard and some rubber bands.

a Draw a rectangle with a perimeter of 12 cm.

b Draw a rectangle with a perimeter of 20 cm.

Answers will vary.

Perimeter – calculating perimeter

- 1 Use what you know about squares and rectangles to work out the perimeter of these shapes. Measuring will not help because they are not to scale. Look carefully at the dimensions.

P = cm

P = cm

P = cm

P = cm

- 2 Show how to find the perimeter of these shapes with an addition sentence and a multiplication sentence for each. Shape A has been done for you.

Shape A

Shape B

Shape C

| Shape | Perimeter by addition | Perimeter by multiplication |
|-------|---|---|
| A | $4 + 4 + 4 + 4 = 16 \text{ cm}$ | $4 \text{ sides} \times 4 \text{ cm} = 16 \text{ cm}$ |
| B | $3 + 3 + 3 + 3 + 3 = 15 \text{ cm}$ | $5 \text{ sides} \times 3 \text{ cm} = 15$ |
| C | $5 + 5 + 5 + 5 + 5 + 5 = 30 \text{ cm}$ | $6 \text{ sides} \times 5 \text{ cm} = 30 \text{ cm}$ |

Perimeter – calculating perimeter

- 3** Predict the perimeter of each of these shapes on the square centimetre grid below. Show what the perimeter is by drawing and labelling.

a A square with 4 cm sides.

$$P = \boxed{16} \text{ cm}$$

b A rectangle with two 3 cm sides and two 1 cm sides.

$$P = \boxed{8} \text{ cm}$$

- 4** Use the 1 cm grid paper to construct the following shapes at each starting point with the stated perimeter.

a 10 cm

b 14 cm

c 8 cm

Answers may vary.

- 5** Here are more square centimetre grids.

a What is the perimeter of this irregular shape?

$$P = \boxed{16} \text{ cm}$$

b Draw a square with the same perimeter.

Perimeter – perimeter word problems

1 Solve these perimeter problems:

- a Pablo drew a rectangle in his workbook. The perimeter of the rectangle was 34 cm. Two sides are 12 cm long. How long are the other two sides?

- b The perimeter of a square shaped pool is 100 m. What are the measurements of the pool?

- c West Thyme Primary School is adding a new fence around the outside of the playground. The playground is rectangular shaped. One length is 16 m. The perimeter is 52 m. What are all the measurements of the playground?

- d Liam made a pentagon from magnetic sticks. If the perimeter of his shape is 55 cm, what is the length of one side?

Length of one side = 11 cm

What to do

Try these perimeter challenges:

- a The perimeter of this square is 32 cm.
When it is cut in half, we get two identical rectangles.
What is the perimeter of one rectangle?

- b This rectangle is 6 cm wide.
How long is it if the perimeter is 32 cm?

10 cm

The lines on some of the sides are to show you they are all the same length.

THINK

- c Find the perimeter of this shape if the length is 12 cm.

What to do

Use the clues in each of these diagrams to find the perimeter.

Diagram 1

Perimeter = 64 cm

Diagram 2

Perimeter = 54 cm

Area – square centimetres

Area is the amount of space a shape covers. It is a 2D measurement. We measure area in square units. For small areas, we use square centimetres.

1 cm
1 cm
= 1 square centimetre
= 1 cm²

- 1 Each square covers an area of 1 square centimetre (1 cm²). Record the area of each shape:

Area = 7 cm²

Area = 6 cm²

Area = 11 cm²

Area = 9 cm²

- 2 Find the area of these irregular shapes. Use the 1 cm grid paper as your guide:

Area = 12 cm²

Area = 13 cm²

Area = 11 cm²

Area – square centimetres

- 3 Use the 1 square centimetre grid paper to shade some irregular shapes with the following areas:

Answers will vary.

a 4 square centimetres

b 6 square centimetres

- 4 How many shapes can you make with an area of 9 square centimetres? Show them on the grid below. The first one has been done for you.

- 5 What is the area of each rectangle? Each square in the grid has an area of 1 cm².

a

Area = 20 cm²

b

Area = 25 cm²

c

Area = 18 cm²

Area – square metres

When we need to find the areas of large spaces, we use square metres.
The symbol for square metres is m².

1 In groups, stick pieces of newspaper together to make a square that is 1 metre long and 1 metre wide.

- a How many people can fit standing inside one square metre? *Answers will vary.*
- b Cut your square into five pieces and then stick it back together. It can be any shape. Draw it here:

Teacher check.

Is this still one square metre? *Yes*

2 Use your square metre to measure five areas in your school. Estimate first.

| Space to be measured | Estimate | Actual area |
|----------------------|---------------------------|-------------|
| a | | |
| b | | |
| c | <i>Answers will vary.</i> | |
| d | | |
| e | | |

Area – square metres

3 Rewrite these measurements the short way. The first one has been done for you.

- | | | | |
|---|--|---|--------------------|
| a | Twenty nine square metres | = | 29 m^2 |
| b | Thirty seven square metres | = | 37 m^2 |
| c | Three hundred and two square metres | = | 302 m^2 |
| d | Six hundred and ninety one square metres | = | 691 m^2 |
| e | Eighty point seven square metres | = | 80.7 m^2 |
| f | Seven point two square metres | = | 7.2 m^2 |

4 Miss Farbio has a rectangular garden with six fence posts. The distance between each post is 1 metre and the area of her garden is 2 m^2 .

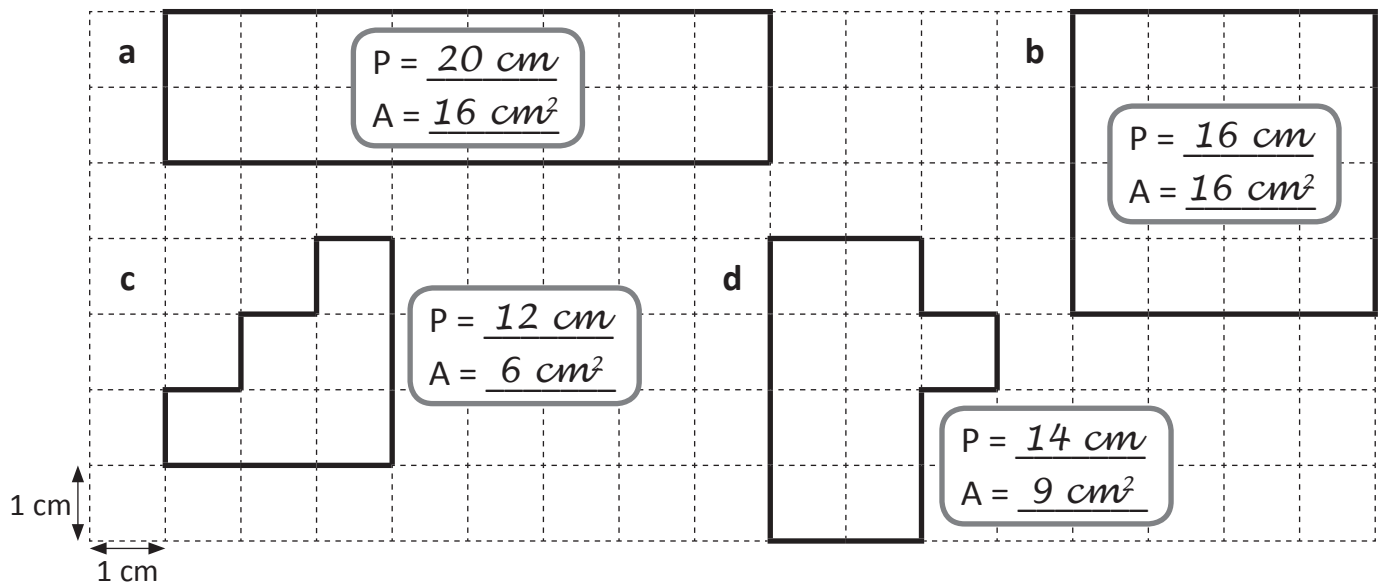

Her neighbour Mr Gubbio has 14 fence posts, also 1 metre apart. What is the area of his garden in square metres if one side of the fence has three posts, just like Miss Farbio's garden?

Area of Mr Gubbio's garden = 10 m^2

Area – investigating area and perimeter

1 What is the area and perimeter of these shapes?

2 Use the grid below to draw two shapes with a perimeter of 12 cm but with different areas:

Sample answers:

3 Colour a square with a side length of 4 cm. Label its area and perimeter. Now colour a square with a side length of 5 cm and label its area and perimeter.

What do you notice? A and P are the same in the 1st square.

Area – investigating area and perimeter

- 4 Look at this 1 cm square grid. Some of the grid is shaded. Work out the area of the part that is shaded.

The area of the part that is shaded is 15 cm²

A faster way to calculate area is to multiply the length by the width.

Look at this square. If we multiply the length by the width, we get 16 cm². This is the same as counting all the squares.

- 5 Calculate the area of each of these shapes by multiplying the length by the width:

What to do

Solve these area challenges based on the dimensions:

- a** A framed photograph is 16 cm × 25 cm. The frame itself is 5 cm wide. Use these clues to find the area of the photograph inside the frame.

The area of the photograph is 90 cm².

- b** Using a ruler, copy this shape so it reflects on the right of the mirror line. Then work out the total area of this shape.

The total area of this shape is 9 cm².

What to
do next

Solve these area challenges based on the dimensions:

- a Max folded a rectangular piece of paper in half three times to make a square. If one side of the final square was 2 cm, what was the area of the piece of paper he started with?

The area of the piece of paper he started with was 32 cm².

- b Amber received a drawing from her cousin Cameron. The drawing was on a square piece of paper folded in half four times. If the area of the folded drawing was 4 cm², what was the area of the original piece of paper that Cameron drew on?

The area of the original piece of paper that Cameron drew on was 64 cm².
