Multiplication facts – 8 times table

Here is the 8 times table. You can double the 4 times table to get the 8 times table.

1 Complete the 4 times table as quickly as you can. Then after you have checked them, double them to complete the 8 times table facts:

$1 \times 4 =$	4	$1 \times 8 =$	8
$2 \times 4 =$	8	$2 \times 8 =$	16
$3 \times 4 =$	12	$3 \times 8 =$	24
$4 \times 4 =$	16	$4 \times 8 =$	32
$5 \times 4 =$	20	$5 \times 8 =$	40
$6 \times 4 =$	24	$6 \times 8 =$	48
$7 \times 4 =$	28	$7 \times 8 =$	56
$8 \times 4 =$	32	$8 \times 8 =$	64
$9 \times 4 =$	36	$9 \times 8 =$	72

2 Use double, double and double again for these problems:

a $6 \times 8 =$ 48

b $4 \times 8 =$ 32

c $9 \times 8 =$ 72

If you get stuck on the 8s, think double, double and double again.
For example, 3 × 8
Think: double 3 is 6
double 6 is 12
double 12 is 24

3 On Mia's calculator, the 8 key is broken. Show her the steps she could follow to find the answer to 16 × 8. Use a calculator to test the steps.
$16 \times 2 = 32$

$32 \times 2 = 64$

$64 \times 2 = 128$

Mental multiplication strategies – multiplying by 10 and 100

When we multiply any number by 10, a zero goes in the units column and the digits all move one space along to the left.

When we multiply any number by 100, a zero goes in both the units and the tens columns and all the digits move two spaces along to the left.

Thousands	Hundreds	Tens	Units	
		4	5	
	4	5	0	× 10
4	5	0	0	× 100

1 **Use the place value tables to multiply these numbers by 10 and 100:**

a

		1	5	
	1	5	0	× 10
1	5	0	0	× 100

b

4	8	0	0	× 100

c

7	2	0	0	× 100

Can you see a pattern in each of the tables?

2 **Use patterns to solve these:**

b 25 × 1 = $\boxed{25}$ 25 × 10 = $\boxed{250}$ 25 × 100 = $\boxed{2\ 500}$

c 82 × 1 = $\boxed{82}$ 82 × 10 = $\boxed{820}$ 82 × 100 = $\boxed{8\ 200}$
Mental multiplication strategies – multiplying by 10 and 100

How do you multiply by other multiples of 10? Let's look at 8 × 20.
We can use known times tables facts and write this as place value amounts:

8 × 2 tens = 16 tens So, 8 × 20 = 160

1 **Draw lines from the numbers written as place value amounts to the times tables facts:**

10 tens	14 tens	36 tens	27 tens	12 tens	16 tens

3 × 4 tens	4 × 4 tens	5 × 2 tens	7 × 2 tens	6 × 6 tens	9 × 3 tens

2 **Write the digit that represents each place value amount:**

a 10 tens = $\boxed{100}$ **b** 36 tens = $\boxed{360}$ **c** 12 tens = $\boxed{120}$

d 15 tens = $\boxed{150}$ **e** 22 tens = $\boxed{220}$ **f** 8 tens = $\boxed{80}$

g 19 tens = $\boxed{190}$ **h** 16 tens = $\boxed{160}$ **i** 18 tens = $\boxed{180}$

3 **First complete the hints and then use them to write the facts:**

Hints: **Facts:**

a 4 × 6 tens = $\boxed{24}$ tens   4 × 60 = $\boxed{240}$

c 2 × 7 tens = $\boxed{14}$ tens   2 × 70 = $\boxed{140}$

4 **Complete the number wheels:**

a Wheel × 30: outer values 60, 120, 240, 270, 90, 300, 150, 210; inner values 2, 4, 8, 9, 3, 10, 5, 7

Multiplication and Division

Mental multiplication strategies – split strategy

The split strategy is when we multiply numbers in 2 pairs and then add the parts. Let's use the split strategy for 26 × 4.

- Split 26 into 20 and 6.
- Multiply each part.
- Add the answers together.

$$26 × 4 \longrightarrow 20 × 4 + 6 × 4$$

$$80 + 24 = 104$$

$$\text{So, } 26 × 4 = 104$$

1 **Use the split strategy to answer these:**

a 34 × 3 ⟶   30 × 3 + 4 × 3

90 + | 12 | = | 102 |

So, 34 × 3 = | 102 |

b 45 × 5 ⟶ | 40 | × | 5 | + | 5 | × | 5 |

| 200 | + | 25 | = | 225 |

So, 45 × 5 = | 225 |

c 52 × 4 ⟶ | 50 | × | 4 | + | 2 | × | 4 |

| 200 | + | 8 | = | 208 |

So, 52 × 4 = | 208 |

Mental multiplication strategies – compensation

Use the compensation strategy to make it easier to multiply 2-digit numbers that are close to a ten.

Look at 4×19.

19 is close to 20, so we can multiply by the next multiple of ten which is 20. Then we build down because we have an extra group of 4.

$$4 \times 19 \longrightarrow 4 \times 20 = 80 - 4$$

$$\text{So, } 19 \times 4 = 76$$

1 **Use the compensation strategy to answer these:**

a $5 \times 29 \longrightarrow 5 \times \boxed{30} = \boxed{150} - \boxed{5}$

So, $5 \times 29 = \boxed{145}$

b $3 \times 49 \longrightarrow 3 \times \boxed{50} = \boxed{150} - \boxed{3}$

So, $3 \times 49 = \boxed{147}$

c $4 \times 39 \longrightarrow 4 \times \boxed{40} = \boxed{160} - \boxed{4}$

So, $4 \times 39 = \boxed{156}$

2 **Use the compensation strategy to answer these questions. This time you need to look for more than one extra group to subtract:**

We have rounded up to 20. So instead of 4 × 18 we have 4 × 20. This is 2 more groups of 4. So we subtract 8.

a $4 \times 18 \longrightarrow 4 \times \boxed{20} = \boxed{80} - \boxed{8}$

So, $4 \times 18 = \boxed{72}$

b $3 \times 17 \longrightarrow 3 \times \boxed{20} = \boxed{60} - \boxed{9}$

So, $3 \times 17 = \boxed{51}$

Mental multiplication strategies – doubling and halving

We can change the factors of a multiplication question to make it easier. Look at 16 × 3. If we halve the largest factor and double the smaller factor, we make an array on the grid that is the same size. Both arrays have the same amount of squares. Count the squares, are they equal to 8 × 6?
16 × 3

Halve   Double

8 × 6 = 48
1 **Make these problems easier by using doubling and halving. Shade an array for each:**

a   18 × 3

Halve   Double

9 × 6 = 54

b   14 × 4

Halve   Double

7 × 8 = 56

$$9\overline{\smash{\big)}\,38} \quad \boxed{4}\;r\;\boxed{2}$$

Check with the multiplication fact and add the remainder:

$\boxed{9}$ × $\boxed{4}$ = $\boxed{36}$ + $\boxed{2}$

c
$$6\overline{\smash{\big)}\,45} \quad \boxed{7}\;r\;\boxed{3}$$

Check with the multiplication fact and add the remainder:

$\boxed{6}$ × $\boxed{7}$ = $\boxed{42}$ + $\boxed{3}$

d
$$5\overline{\smash{\big)}\,48} \quad \boxed{9}\;r\;\boxed{3}$$

Check with the multiplication fact and add the remainder:

$\boxed{5}$ × $\boxed{9}$ = $\boxed{45}$ + $\boxed{3}$

2 **What is the question if I am checking with this multiplication fact?**

$$5\overline{\smash{\big)}\,33} \quad \boxed{6}\;r\;\boxed{3}$$

5 × 6 = 30 + 3

Written methods – short division with 3-digit numbers

In short division with 3-digit numbers we split the number:

468 is 400 + 60 + 8
400 divided by 2 is 200, so we put a 2 in the hundreds place.
60 divided by 2 is 30, so we put a 3 in the tens place.
8 is divided by 2 is 4, so we put a 4 in the units place.

a 368 is __300__ + __60__ + __8__

b 445 is __400__ + __40__ + __5__

c 567 is __500__ + __60__ + __7__

d 235 is __200__ + __30__ + __5__

2 **Now put these split numbers back together:**

a 500 + 70 + 8 is ____578____

b 700 + 90 + 4 is ____794____

c 200 + 40 + 6 is ____246____

d 800 + 50 + 5 is ____855____

Written methods – short division with 3-digit numbers

Sometimes we need to split the number a different way,
for example: 515 = 500 + 15
500 divided by 5 is 100, so we put a 1 in the hundreds place.
15 divided by 5 is 3, so we put a 3 in the units place.
What goes in the tens place?
A zero does. The zero has the very important job of
keeping the other numbers in their place!

5 **Practise these problems. We have put the zero in to remind you:**

a 4) 8 1 2   → 2 0 3

b 3) 9 2 4   → 3 0 8

c 3) 9 1 2   → 3 0 4

d 4) 8 2 4   → 2 0 6

6 **Practise these problems. This time, you need to remember the zero!**

a 3) 9 1 8   → 3 0 6

b 6) 6 1 2   → 1 0 2

c 4) 8 3 2   → 2 0 8

d 4) 8 1 6   → 2 0 4

Triple product

Getting ready

This is a game for 2 players. You will need a copy of this page, 6 counters each and 3 dice.

C
copy

What to do

Player 1 rolls all 3 dice and chooses 2 of the numbers to multiply. If the player can see the answer in the grid, they claim this number by placing a counter over the number. Then Player 2 has a turn. The winner is the first to place all 6 counters on the grid.

Multiplication and Division

Getting ready
This is a game for three players. Each player needs a copy of this page. The caller needs a pile of the numbers from 1 to 9.

C copy

What to do
Each multiplication grid contains all the answers, while the factors are missing. Remember factors are the numbers that you multiply to get the answer.

The aim of the game is to be the first player to fill their grid with the factors. One hint is provided in each grid to start you off. Choose one person to be the caller and the other two play the round. The caller picks a number without looking and reads it out to the players. The players write it on the grids, if it fits as a factor. The first to fill in one of the grids completely is the winner.

Doubling strategy to 20   apply

Getting ready

This is a game for two players. You will need a copy of page 43, a die and a pencil to write down your scores. You may like to make extra copies of page 43 to play again later. **C copy**

What to do

The aim of this game is to score the highest number of points each time without going over 20. Roll the dice and choose which strategy you will use. From the Strategy column, circle 1 for double, 2 for double-double or 3 for double-double-double. For example, Player 2 has rolled a 5 and has chosen strategy 3 double-double-double. This makes a score of 40 but because it is over 20 it doesn't count. Look at the rest of the sample game to see how the game turned out.
